Special waste treatment and intermediation

We organize special hazardous and non-hazardous waste disposal services, mainly of industrial origin. This is an activity of commercial intermediation without any waste "custody", authorized in Category 8A (over 200.000 t/y). We follow all the stages of research and customer management, up to planning and waste delivery to the facilities.

Polluted site remediation and securing

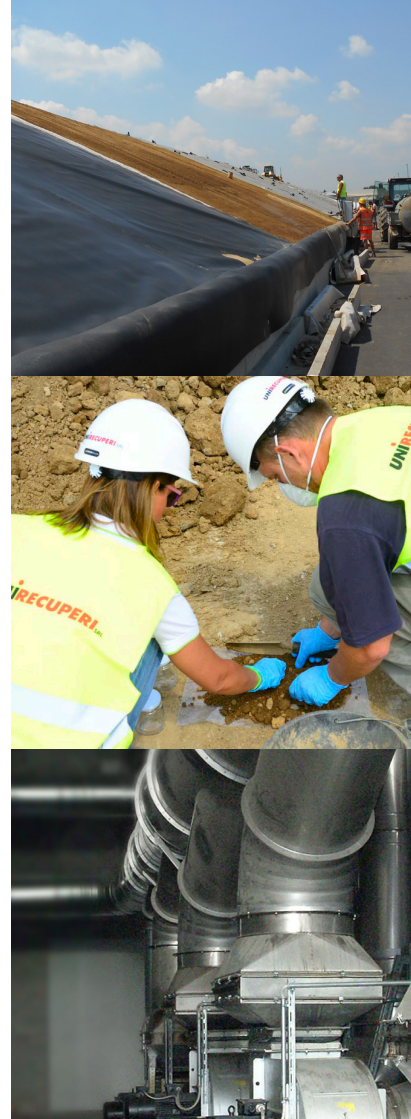

Through a multidisciplinary technical staff, for over 30 years we have been designing and implementing remediation and safety measures for polluted sites and disused areas, applying the best available intervention techniques (BAT) such as soil-washing, biopic, diaphragms, bioventing, Multi Phase Extraction (MPE), assisted biodegradation and many others.

Landfills and environmental treatments

We design and build landfills for urban and special waste with cutting-edge solutions and technologies, complementary to environmental plant engineering, also carrying out waste handling and waste management activities. We are specialized in interventions of recovery and environmental restoration starting from multilayer capping systems and waterproofing for landfills, up to the requalification and reutilization of polluted sites and disused areas.

Municipal solid waste integrated service

With over twenty plants and platforms, we perform an integrated service of urban hygiene, separate waste collection and street sweeping, storage, recovery and disposal, organic fraction selection and composting, recovery and recycling of the differentiated product fractions, biogas production from waste.

From waste to site remediation: a sustainable chain

UNIECO AMBIENTE today is a private holding company, born and raised within the Emilia-based cooperative movement. Thanks to many decades of experience in the waste sector, it has achieved one of the top positions among private environmental groups, in terms of turnover and results.

Its sustainability supply chain involves about 20 private or mixed public-private companies based in 5 different regions committed to the management, treatment and intermediation of special waste, the remediation and securing of polluted sites, the recovery and enhancement of the environment, the production of energy from renewable sources, as well as the collection and management of urban solid waste, particularly in Tuscany.

Experience, know-how, ability, reliability have consolidated and expanded in a sustainable supply chain, working within the law, with a corporate social responsibility towards its human resources, its customers and towards the institutions and other stakeholders.

The Italian approach to the circular economy is an extraordinary opportunity for us, as for the country, to extend and enrich our supply chain and its sustainability.

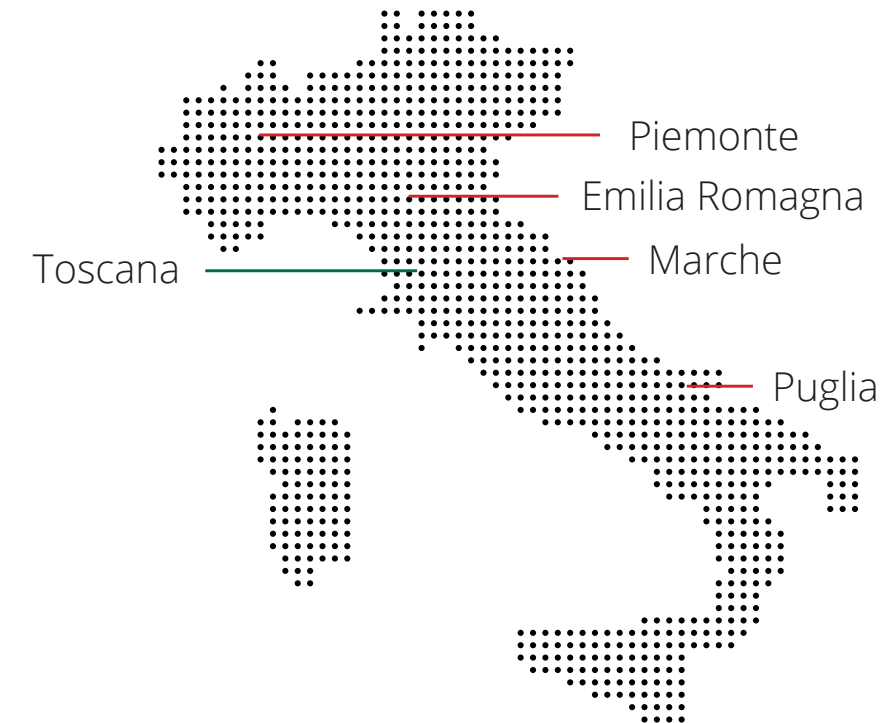

The near future for us is represented by an investment plan of about 35 million euros in the next three years 2018-2020, mainly allocated to measures on existing plants and to industrial development initiatives for the upgrading of plant capacity, in the treatment and recovery of special and urban waste.

Holdings

Through subsidiaries and shareholding companies and an allocation of over twenty plants and platforms, we perform an integrated service of urban hygiene, separate waste collection and street sweeping, storage, recovery and disposal, organic selection and composting, recovery and recycling of the product of the separate waste collection, biogas production from waste.

Sustainability in the supply chain

Through a set of high-tech companies, using the best available intervention techniques (BAT), we offer solutions in the environmental field as regards polluted site remediation and securing, for the realization, management and closure of landfills, for the treatment, selection, recovery and intermediation of hazardous and non-hazardous special waste, mainly of industrial origin.
